WILLAMETTE HEART ASSOCIATES
Results letter — 2026-11-02

Patient: Erik Halvorsen Sr. DOB: 1954-03-08 MRN: 00731188
Physician: Farah Nadeem, MD

Dear Mr. Halvorsen,

The 48-hour Holter monitor you wore from 2026-10-27 to 2026-10-29 (ordered at your October 20 visit) showed normal sinus rhythm with occasional premature ventricular contractions (PVCs), under 1% of beats. There was no atrial fibrillation and no pauses.

These findings are benign and do not change your plan: continue atorvastatin 40 mg and lisinopril. Please call if you notice fainting or a racing heartbeat.

We will see you in April 2027 as planned.
